254.26 m

WALL TIME

4.46s

Best yaw: m1-agent-01 **+40.6%** · Best CTE: m1-agent-02

+62.1%

Winning both KPIs $\geq +30\%$ (27 agents): m1-agent-01, m1-agent-07, m2-agent-05, m1-agent-09, m2-agent-08, module-2.v2_agent-05, module-2.v2_agent-09, m1-agent-02, m2-agent-07, m1-agent-10, m2-agent-02, m2-agent-10, m2-agent-01, m2-agent-09, m2-agent-03, m1-agent-03, module-2.v2_agent-06, module-2.v2_agent-02, m1-agent-06, m2-agent-06, module-2.v2_agent-04, module-2.v2_agent-08, m1-agent-04, m1-agent-05, module-2.v2_agent-01, module-2.v2_agent-07, module-2.v2_agent-10

1. Headline scatter — yaw vs CTE improvement

Each agent is one point. **Top-right is the goal** — both KPIs improve over V0. The dashed diagonal is $y = x$: above it, an agent improved CTE more than yaw (good trajectory integration); below, the opposite. The V0 baseline sits at the origin.

2. Module-level aggregation

Performance grouped by which module shipped the agent.
Mean $\Delta\%$ over only the agents that reconstructed successfully;
failures shown separately.

family	n ok / total	yaw $\Delta\%$ (mean $\pm \sigma$)	CTE $\Delta\%$
module-1	10/10	+37.8% $\pm$ 3.1%	+56.5
module-2	10/10	+37.7% $\pm$ 2.9%	+54.6
module-2.v2	10/10	+36.4% $\pm$ 3.2%	+55.1

• 3. Per-platform breakdown

Same cohort, but split by the vehicle platform the agent was evaluated on. Agents that win one platform but lose another have a platform-specific calibration; agents whose dots cluster together generalise.

platform	agents	yaw Δ% (mean ± σ)
FORD_F_150_LIGHTNING_MK1	30	+20.0% ± 2.3%
FORD_MUSTANG_MACH_E_MK1	30	+51.5% ± 4.7%

● 4. Per-segment yaw RMSE distribution

Each box summarises one agent's per-segment yaw RMSE — pooled RMSE can hide that an agent does great on most segments but pathologically badly on a few. The y-axis is logarithmic to compress outliers.

5. Per-agent canonical scorecard

The full table. Failed reconstructions are surfaced with their reason — no fake zeros.

● 6b. Operating-contract audit

The grader strips `sim_df` to an allowlist before calling each agent's `predict()`, so an agent cannot read truth at inference time. This section reports source-level intent — which agents *would have* read truth columns if the grader hadn't intervened. A clean audit is its own quality signal.

Clean cohort: no agent referenced truth-derived column names inside their `predict()` body.

7. Reconstruction quality (substrate signal)

How many agents shipped the right artefacts to be canonically gradable. Failures here are a substrate or contract problem, not a model problem.

format check	pass	fail
